AI-POWERED INFRASTRUCTURE MONITORING

GCP Monitoring Agent

Your GCP infrastructure, guarded by AI. Automated inspection, intelligent analysis, instant alerts — all from a single Cloud Run service.

AT A GLANCE

What GCP Monitoring Agent Does

Fully automated. AI-powered. One command to deploy.

WHY AI FOR MONITORING?

Beyond Threshold Alerts

TRADITIONAL

Rule-Based Alerting

- CPU > 90% \u2192 fire alert
- No root cause analysis
- Cannot predict trends
- One metric, one rule

ACT II

System Architecture

Five modules, one pipeline. Cloud Scheduler triggers, Cloud Run executes, GCS persists, Telegram delivers.

SERVERLESS · 1 VCPU / 512 MB · PYTHON 3.13

From GCP APIs to Structured Reports

INSPECTION PIPELINE

01

Enumerate

list() all GCE instances in target zone

02

Fetch

Query CPU / Memory / Disk via Monitoring API

03

Aggregate

3-min window, 60-sec alignment period

04

Analyze

Gemini 2.5 Flash inspects each target

THREE MODES, ONE MODEL

Gemini 2.5 Flash

Fast checks, deep reasoning, and natural conversation — a single model handles every monitoring scenario.

> Output: status \u00b7 risk_level \u00b7 recommendation \u00b7 cross-resource correlation

STANDARD MODE

Rapid threshold comparison across 5 metrics. Outputs **ok / warning / critical** status with concise reasoning.

DEEP MODE

Multi-dimensional correlation analysis. Identifies resource dependencies and emerging risks. Produces **specific, actionable recommendations**.

YOUR OPS CENTER, IN YOUR POCKET

Telegram Bot

Instant alerts + slash commands + free-form AI chat. All inside the messaging app you already use.

> Auto alerts push proactively. No manual polling required. MarkdownV2 rich formatting with automatic plain-text fallback.

\U2318 /STATUS

View latest inspection report with formatted tables

\U2318 /INSPECT VM-NAME

Instant single-VM diagnosis with AI analysis

\U2318 /HELP

One Command to Production

DEPLOYMENT PIPELINE

01
Build
Docker build with Python 3.13-slim + gcloud CLI

02
Push
gcloud builds submit to Container Registry

03
Deploy
gcloud run deploy with 1 vCPU / 512 MB

04
Schedule
Cloud Scheduler cron: */5 * * * *

THE BOTTOM LINE

\u2248 The Price of a Coffee, Every Month

CLOUD RUN

$5\u20138

CLOUD SCHEDULER

$0.50
